What we LOVE right now at RRFPP

NEW HA⁵ Delivers!

Falling somewhere between a toner and a lightweight serum, HA⁵ is hitting the market with a big splash. Variations of this lightweight wonder have been a main stay of many facial routines; however, it has now been blended scientifically with 5 different forms of hyaluronic acid for greater plumping of the epidermis.

Hydrating complexes are a very important part of a brightening, hydrating, and wrinkle-smoothing skin care routine. HA⁵ is also loaded with antioxidants to protect against invisible environmental aggressors.

HA⁵ is the last step of your skin care routine before a moisturizer and sunscreen, and it has short term and long-term benefits. Maintaining use of hyaluronic acid (HA⁵) daily will continue to hydrate the skin up to 8 hours, and with continued use, HA⁵ will provide long-term benefits.

Kick it up with Kybella™

Since October, our physicians have been injecting Kybella™ to eliminate submental fullness, a.k.a. double chin. We are seeing fantastic results in as little as 2 sessions for moderate fullness. Our clients have tolerated Kybella™ injections very well. We often

hear, "That was a breeze." Swelling is the number one side effect we observe and it usually lasts anywhere between 3 and 5 days. Many clients say that they notice the swelling more themselves but rarely does anyone else.

Injections are separated between 6 weeks and the fat removal is permanent. The injection takes less than 5 minutes to administer and an ice pack is used for a few hours after the injection. Bruising is very rare; however, tenderness at the injection site is occasionally reported.

Give us a call to kick up your selfie game with Kybella™!

Love your Skin with Lytera®

It's a big word with BIG benefits, "Niacinamide". Quietly building for years, we expect to see the buzz about niacinamide reach an exciting state in 2016, and for good reason:

There is growing research showing that it benefits skin in multiple ways, including improving elasticity, regulating pore size, evens out skin tone, and enhances skin's barrier function. Niacinamide has a potential for helping with acne, which makes it a particularly great ingredient for those struggling with breakouts AND wrinkles (AKA "brinkles"), and, lest we forget, enlarged pores.

Lytera®, the brightening complex in the SkinMedica's® line, has replaced hydroquinone. Niacinamide is the chemical in Lytera® that evens out skin tone. We often combine Lytera® with a series of Intense Pulsed Light (IPL) treatments. Lytera® is the at-home portion of your in-office procedure. Say goodbye to brown spots forever with Lytera®. Lytera®, unlike hydroquinone, can be used annually without interruption.
